

## ABSTRACT OF THE DISCLOSURE

In an automatic analyzer, necessary setup works are displayed prior to analysis operation. The present invention can realize an automatic analyzer which can be used by an inexperienced operator to execute all necessary setup works. A maintenance button, data erase button, reagent status button, reagent prime button, calibration button and QC button are displayed on a system viewing screen displayed on an operation part. The display colors of the maintenance button or the like are changed(for example, the display color is changed to red, yellow or the like) in response to the status of the automatic analyzer in order to recognize necessary setup works prior to analysis operation for an operator.
